

Davidson

May 24, 1965

Mr. D. M. Wear, Superintendent
L & N Railroad Company
Room 308
Union Station
Nashville, Tennessee

Dear Mr. Wear:

The Tennessee Stream Pollution Control Board held its regular meeting on May 21, 1965. The matter of industrial waste treatment and disposal from L & N Railroad Yards, Nashville, Tennessee, was noted.

The company officials have constructed and placed into operation a system designed to remove a major portion of the oils from the waste water prior to discharge into a surface stream. The progress made by the company officials toward correction of the stream pollution problem is greatly appreciated.

As soon as it can be planned a study will be made of the facilities to determine their efficiency. These facilities must be satisfactorily operated and maintained and a program of sample collection and analysis must be initiated by the company in order that you may know, as well as the pollution control agency, the character of the effluent which is being discharged.

Yours very truly,

S. Leary Jones, Director
Stream Pollution Control
